

WILDRUTE

Manual Software Testing Report

1. Project Information

Item	Details
Website Name	WildRoute
Testing Type	Manual Software Testing
Application Type	Web Application
Testing Approach	Manual Testing
Tester	Sapna Madushani
Test Environment	Web Browser / Desktop
Test Documentation	Test Cases & Bug Reports

2. Introduction

This document presents the results of manual software testing performed on the **WildRoute** web application.

The purpose of the testing was to verify the functionality, user interface, navigation, layout, responsiveness, and user interactions of the application.

Testing was performed from an end-user perspective to identify defects and usability issues that could affect the overall user experience.

The identified defects were documented with test case IDs, bug IDs, reproduction steps, expected results, actual results, severity, and priority.

3. Testing Objectives

The main objectives of testing were:

- To verify that the application functions as expected.
- To identify functional and UI-related defects.
- To verify navigation elements and page layouts.

- To validate form behaviour.
- To identify visual and usability issues.
- To verify that important page elements are displayed correctly.
- To document identified defects in a structured manner.
- To provide evidence that can support future fixes and regression testing

4. Testing Scope

4.1 In-Scope Areas

The following areas were considered during testing:

- Home page
- Navigation menu
- Expedition details pages
- Footer section
- Newsletter section
- Page layout and spacing
- Navigation links
- Text visibility
- Form submission behaviour
- UI consistency
- User interface elements

4.2 Out-of-Scope Areas

The following areas were not covered as part of this manual testing activity:

- Performance testing
- Load testing
- Penetration testing
- Source code review
- Database testing
- Server infrastructure testing
- Automated security testing

5. Testing Types Performed

The following testing activities were performed during the project:

Functional Testing

Verified whether application features and user interactions behaved according to their expected functionality.

UI Testing

Checked the visual appearance, alignment, spacing, visibility, and consistency of interface elements.

Navigation Testing

Verified navigation menus, links, and page-to-page navigation.

Form Validation Testing

Tested the newsletter form and observed the behaviour after submitting user input.

Usability Testing

Reviewed the application from an end-user perspective to identify issues that could affect usability.

Responsive / Layout Testing

Observed page layouts and visual elements to identify spacing, cropping, and display issues.

6. Test Execution Summary

During manual testing, defects were identified and documented.

Metric	Result
Total Bugs Identified	5
High Severity Bugs	2
Medium Severity Bugs	3
High Priority Bugs	2

Metric **Result**
Medium Priority Bugs 3

7. Defect Summary

Bug ID	Test Case ID	Defect	Severity	Priority
WR-BUG-001	WR-HP-031	Layout issue between WildRoute logo and Back to Expeditions link	Medium	Medium
WR-BUG-002	WR-HP-032	Duplicate footer displayed on expedition details page	Medium	Medium
WR-BUG-003	WR-FOOT-009	WildRoute text is cropped in footer	Medium	Medium
WR-BUG-004	WR-FOOT-016	No result displayed after newsletter email submission	High	High
WR-BUG-005	WR-GEAR-001	Navigation menu text is cropped	Medium	Medium

8. Detailed Defect Findings

WR-BUG-001 – Logo and Back to Expeditions Layout Issue

Test Case ID: WR-HP-031

Severity: Medium

Priority: Medium

The WildRoute logo and **Back to Expeditions** link were positioned too close together on the expedition details page.

This resulted in an improper spacing and layout appearance.

Expected Result:

The logo and navigation link should have sufficient spacing and proper alignment.

Actual Result:

The logo and Back to Expeditions link appeared too close together.

WR-BUG-002 – Duplicate Footer

Test Case ID: WR-HP-032

Severity: Medium

Priority: Medium

The footer content was displayed twice at the bottom of the expedition details page.

The duplicated content included elements such as:

- Adventure Spotlight Trail
- Description
- Newsletter
- WildRoute

Expected Result:

The footer should appear only once.

Actual Result:

The footer content was repeated twice.

WR-BUG-003 – Cropped WildRoute Footer Text

Test Case ID: WR-FOOT-009

Severity: Medium

Priority: Medium

The **WildRoute** text in the footer appeared partially cropped.

Expected Result:

The complete WildRoute text should be visible without being cut off.

Actual Result:

The WildRoute text appeared partially cropped in the footer section.

WR-BUG-004 – No Feedback After Newsletter Submission

Test Case ID: WR-FOOT-016

Severity: High

Priority: High

After entering a valid email address and submitting the newsletter form, no visible confirmation or error message was displayed.

Expected Result:

The user should receive clear feedback indicating whether the submission was successful or unsuccessful.

Actual Result:

No visible result or feedback was displayed after submitting the email address.

WR-BUG-005 – Navigation Menu Text Cropping

Test Case ID: WR-GEAR-001

Severity: Medium

Priority: Medium

Navigation menu text was partially cropped in the navigation bar.

Affected navigation items included:

- WildRoute Home
- Gear
- Experiences
- Community

Expected Result:

All navigation menu text should be fully visible with appropriate spacing and alignment.

Actual Result:

Navigation menu text appeared cropped.

9. Severity Distribution

The identified defects were distributed across two severity levels:

Severity Number of Bugs

High 1

Medium 4

Low 0

Total 5

10. Priority Distributio

Priority Number of Bugs

High 1

Medium 4

Low 0

Total 5

11. Key Observations

The following observations were made during testing:

- Some UI elements require improved spacing and alignment.
- Duplicate footer content affects page structure and consistency.
- Text cropping affects the visual quality of the interface.
- Navigation elements should be checked for proper text visibility.
- Newsletter submission should provide clear user feedback.
- UI-related issues were found in multiple areas of the application.

12. Recommendations

Based on the identified defects, the following improvements are recommended:

1. Review the spacing and alignment of navigation elements.
2. Remove duplicate footer content from the expedition details page.
3. Correct footer styling to prevent text cropping.
4. Provide clear success or error feedback after newsletter submission.
5. Review navigation bar styling and ensure all menu items are completely visible.
6. Perform responsive testing across different screen sizes after implementing fixes.
7. Perform regression testing after defect fixes to ensure existing functionality is not affected.

13. Retesting Recommendation

After the identified defects are fixed, the affected areas should be retested. Recommended retesting areas include:

- Expedition details page
- Navigation bar
- Footer section
- Newsletter form
- Responsive layouts

Regression testing should also be performed to verify that the fixes have not introduced new defects.

14. Testing Conclusion.

Manual testing of the **WildRoute** web application identified **five defects** involving layout, navigation, footer presentation, and newsletter submission feedback.

The findings were documented using structured test cases and bug reports, including reproduction steps, expected results, actual results, severity, and priority.

The identified issues provide clear areas for improvement in the application's user interface and user experience. Further testing should be performed after the defects are resolved to verify the fixes and ensure overall application stability.

15. QA Documentation

The following supporting documents are included in this repository:

-  **Test Cases** – WildRoute-Test-Cases
-  **Bug Reports** – WildRoute-Bug Report
-  **Test Evidence** – Screenshots/
-  **Test Report** – Test-Report.pdf
